Emergency Derailment

The Cranemasters team has railed thousands of train cars, including locomotives and all types of railcars, over the course of their careers. A hallmark of the company is our commitment to investing in research and development. As a result, Cranemasters has designed some innovative and trend-setting specialized lifting equipment that no one else in the world has.

Our experienced crews and custom-engineered equipment can handle any type of derailment, from one end of one car in a railyard to multiple cars in the most challenging hard-to-access locations such as swampland, on bridges, in tunnels or even on the side of a mountain. Our response and equipment are sized to meet the needs of the specific situation. In most cases, we can recover a derailment working from only one side as opposed to conventional raiing equipment, which generally works from both sides.

We understand that train derailments impact your company's productivity and bottom-line. That's why Cranemasters is committed to delivering a solution that will fix the problem as quickly and efficiently as possible, minimizing impact on your operations, so you can get back to business.
