## Engineering

As an elite service provider to the railroad industry, Cranemasters is qualified to plan and execute highly complex track structure installations such as:

- Pick and carry installations for multi-diamond assemblies where multiple tracks intersect at grade
- Master or group retarders in hump yards
- Number 20 fully-assembled switches with concrete ties
- Number 20 crossovers in a single piece
- In all types of terrain and weather conditions, a fleet of custom-designed cranes and special rigging equipment can be dispatched quickly to the site of the installation project.

When you need us, we're here to help and our goal is the same as yours – to complete the project with minimal railroad down-time to get the trains that run on your track moving again. Our flexible line of equipment adapts to the needs of the job and improves on the previous limits to size, weight and fragility of structures.
