Hi-rail Cranes

Many jobs are ideally suited for hi-rail cranes. We have been utilizing them for years and continue to rely on them for everything from scheduled work and maintenance to emergency responses when applicable. These cranes offer tried and true reliability with lifting capacities ranging from 60 to 150 tons. The hi-rail capability allows them to be used in locations such as rail yards, bridges, and cuts. Bridges in particular are often in challenging terrain by nature. Hi-rail capabilities allow our cranes to deploy to and function effectively in these often remote locations.

As with so much of the equipment we use in the field, our hi-rail cranes have custom engineering and updated features that allow for state of the art, forward-thinking responses to the challenges railroads routinely face.
